

Saunf Dispenser User Documentation

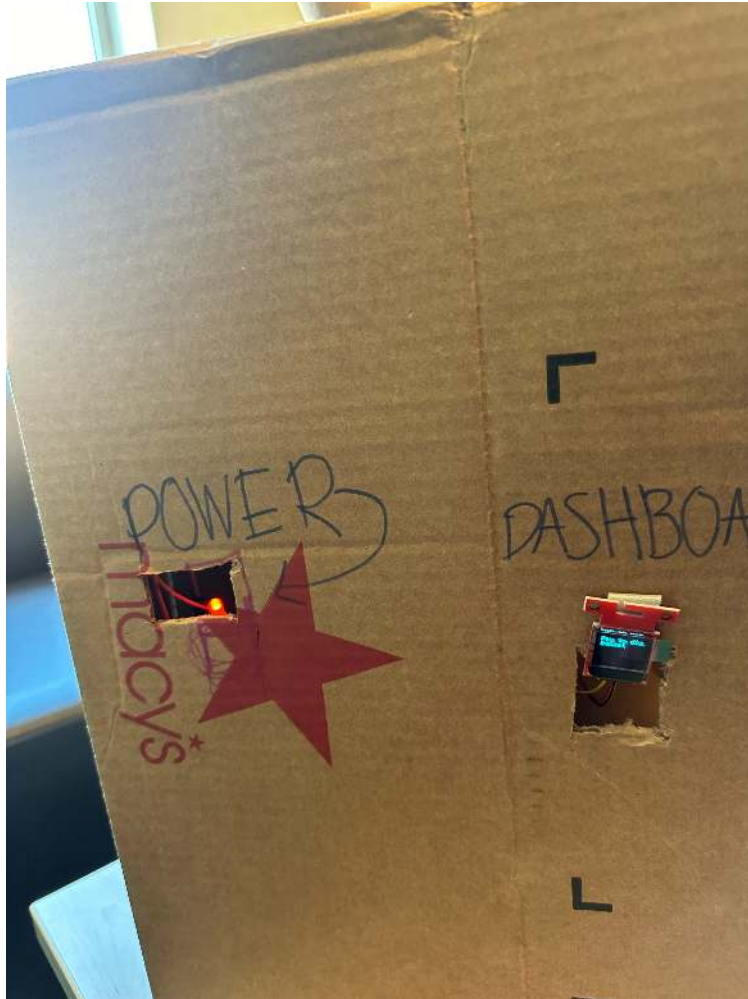

Step 1: Open The Blynk mobile app and click on “Final Project”

You will see this dashboard with a “Pay \$0.25” button

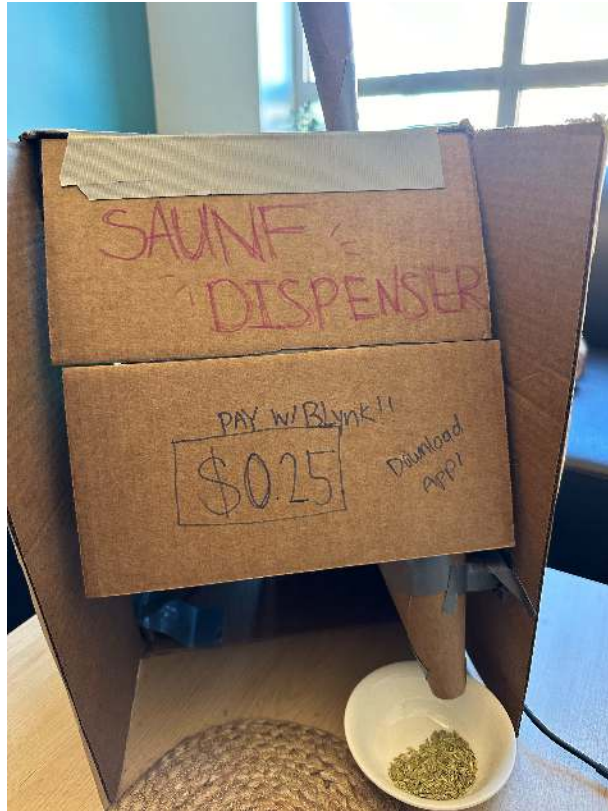

Step 2: On the left side of the dispenser, a red light should be on. That’s how you know the dispenser is not activated. To activate, click the pay button on the app.

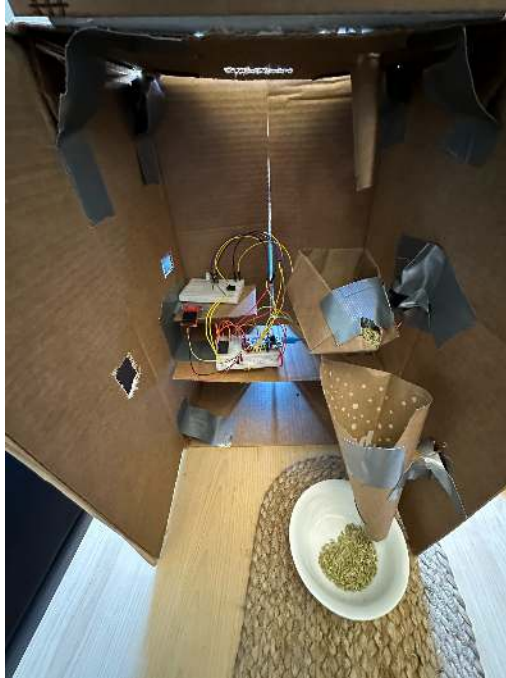

The green light that flashes means that the dispenser is now activated. There should also be a message on the dashboard that says "Paid! Dispenser activated... Enjoy your ___ weather" (depending on the weather in your area).

Step 3: To start dispensing, place a bowl under the funnel in the front and hover your hand over the slit on top of the box machine.

note: you can refill too!

Step 4: Move your hand away to stop dispensing.

Step 6: When you are done dispensing, unclick the pay button on the app so that the red light shows up again and the machine is locked again for other users to use!

Notes:

- Read the message on the OLED display, it tells you when and when you have completed your payment, and when you have it will tell you about the weather personalized to your environment! It's useful information throughout the process
- Watch my **project demo** here! <https://www.youtube.com/watch?v=jCdA7gjq75M>

Dashboard:

If you want, you can check out the total revenue the saunf vending machine has made by...
