

PROJECT B: **HIKING SHOE**

*redesigning hiking shoes as modern
trendy shoe designs*

BACKGROUND & RESEARCH

Target Customer

young adult novice and intermediate hikers who enjoy running, don't want to spend a lot on a shoe, prioritize aesthetics and versatility, and who don't have time/dedication to "break in their shoes" because they enjoy spontaneous adventures.

PRIMARY POSITIONING MATRIX

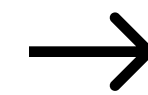

SECONDARY POSITIONING MATRIX

PROBLEM

these hikers are looking for shoes that not only provide comfort and support on various terrains but also reflect their personal style preferences. they want their hiking shoes to be visually appealing and functional in diverse settings. "breaking-into" traditional high-quality hiking shoes are less ideal for young adults who want to enjoy their less-frequent but spontaneous and highly active adventures. they are looking for a solution that meets their multiple needs without requiring significant effort in maintenance. our target customer seeks adequate support for stability on rugged trails as well as mobility for dynamic movements, such as running.

OPPORTUNITY

there is an opportunity to design an outdoor shoe that is stylish enough for young adults to wear everyday while also being versatile and durable in order to withstand a variety of high-level activities such as hiking or trail running.

DESIGN CRITERIA

Durable

Versatile

Supportive
for
stability

Mobility for
dynamic
movements

Drippy

Grippy

Waterproof
OR water-
friendly

Easy to
clean
/ don't get
dirty easily

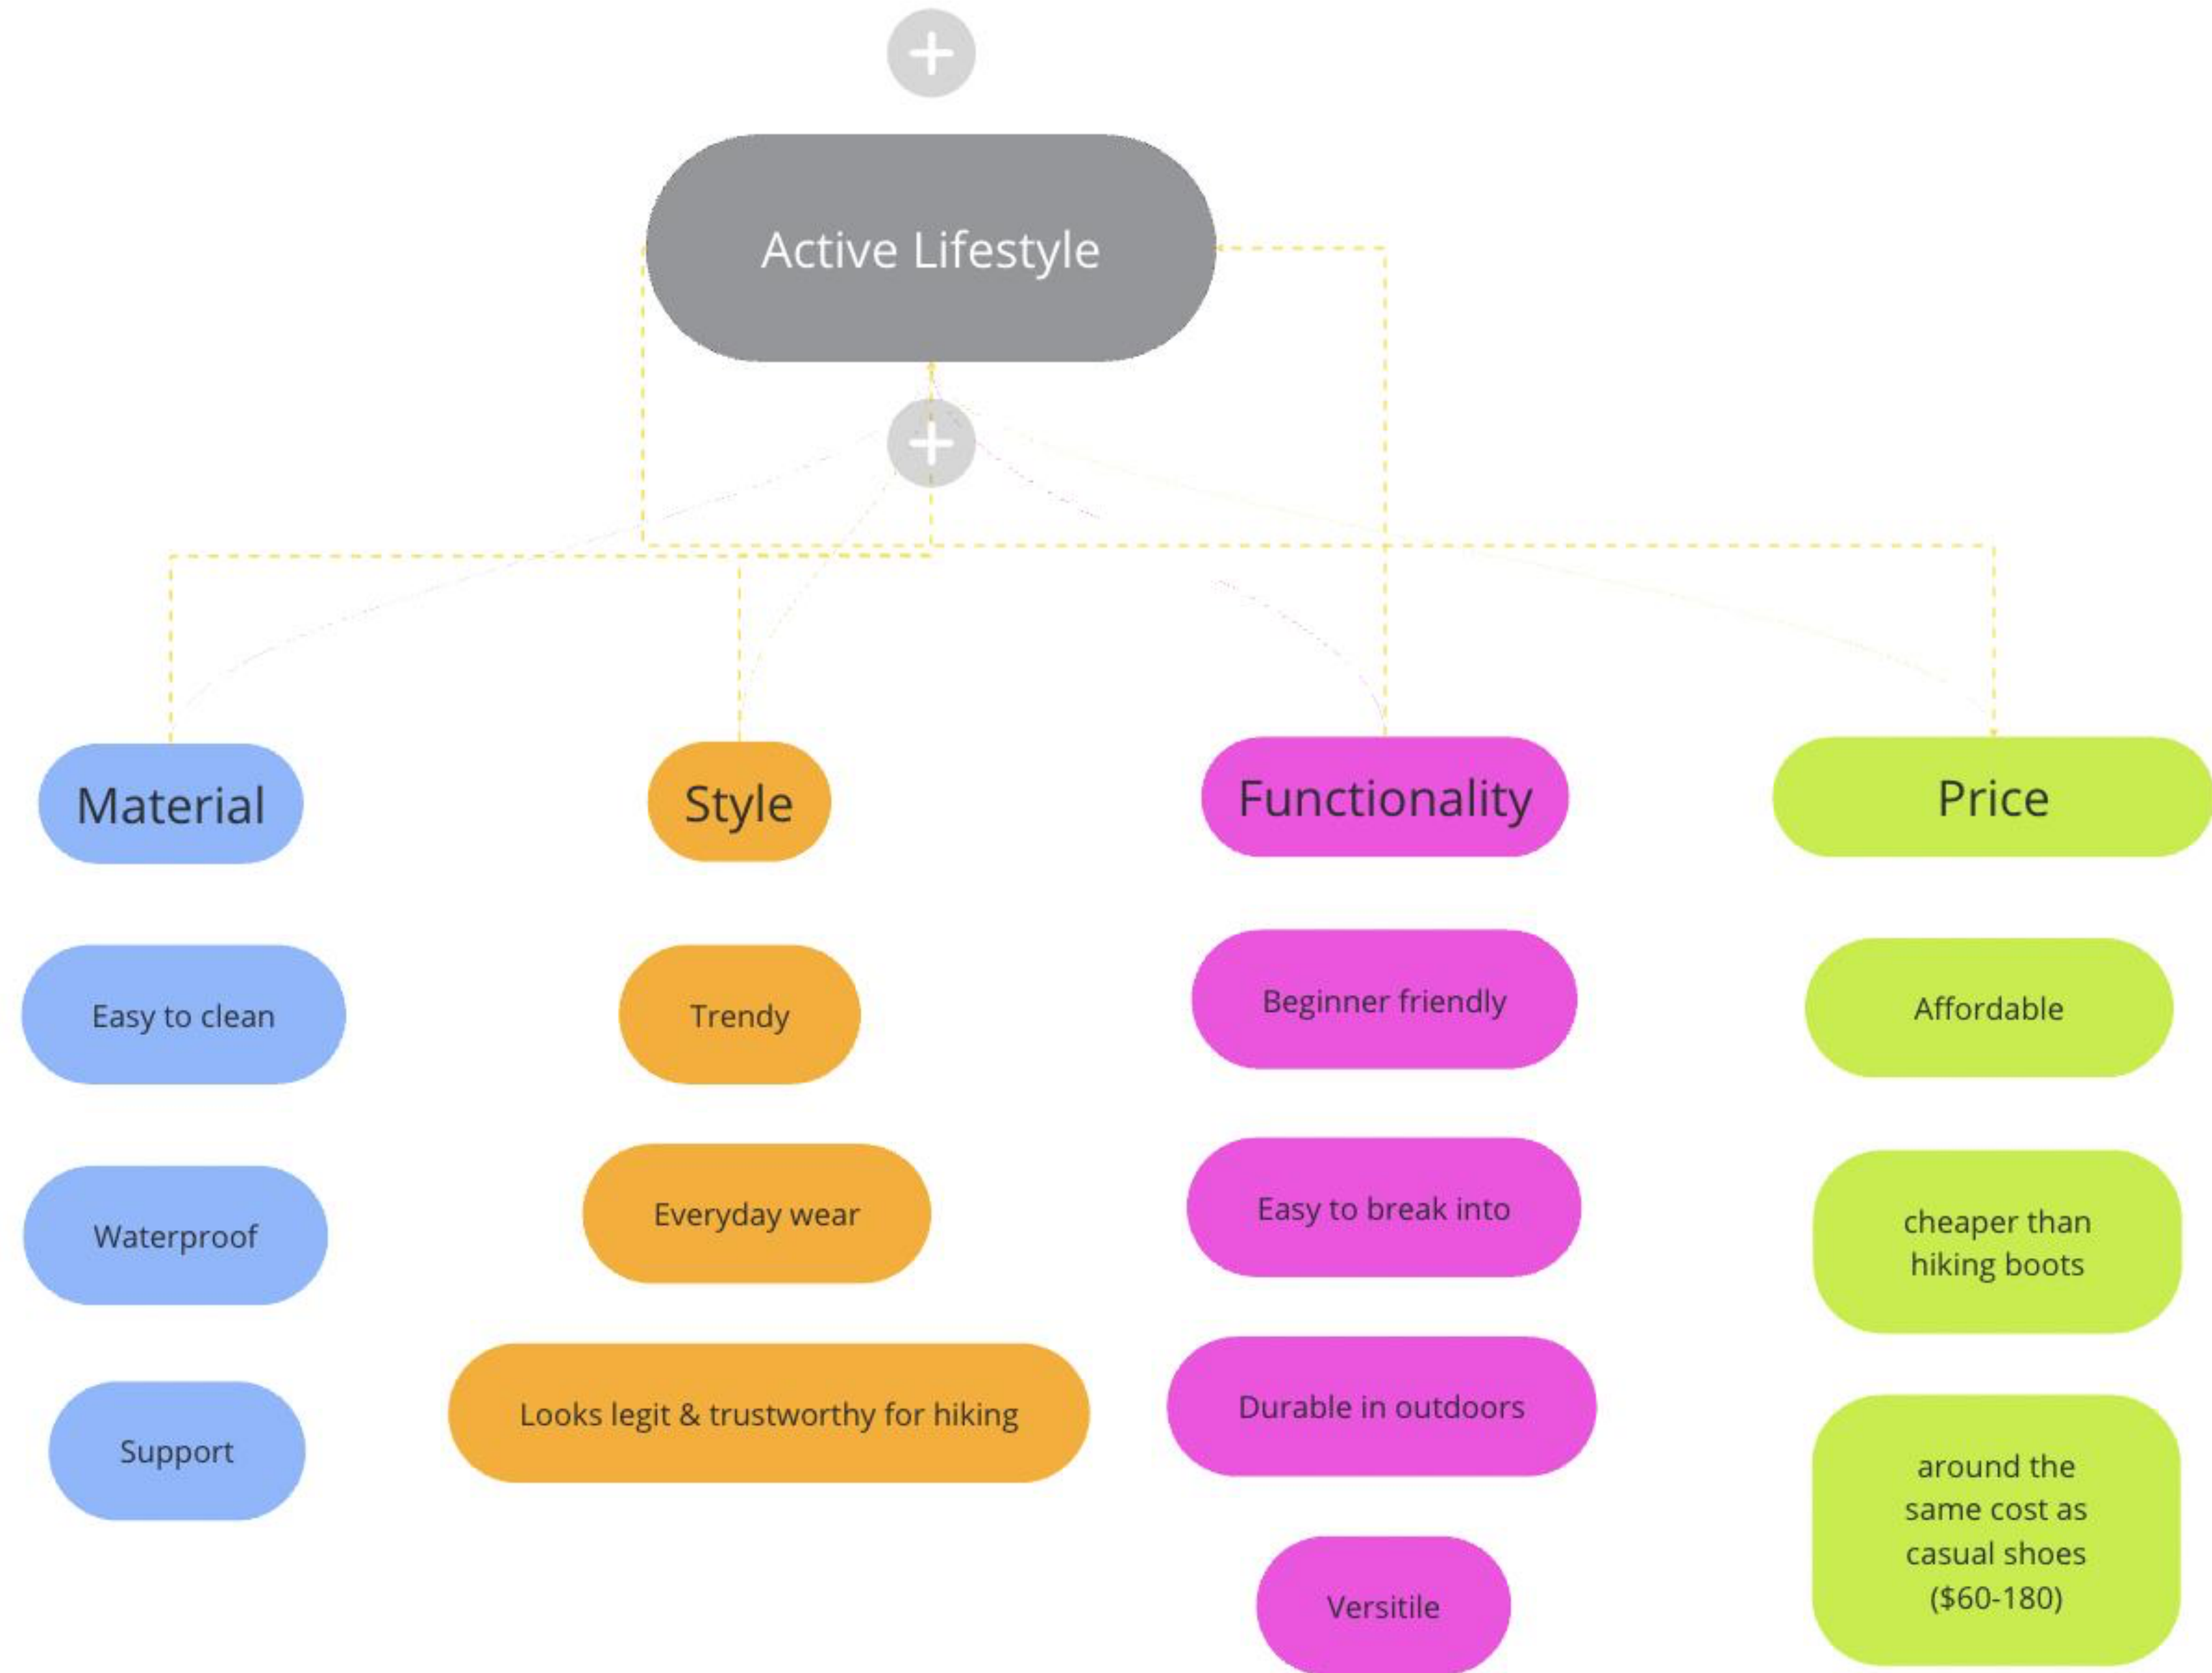

comfortable
to walk long
distance in

Don't have
to or easy
to "break
in"

Warm/insulate
heat AND
breathable/
cooling (like
concrete)

Breathability

MIND MAP

FRAMING QUESTIONS

How can we blend traditional aesthetics with modern features to transform classic hiking boot designs into trendy, everyday footwear?

How might take patterns and colors that have been popular amongst young adults into a lifestyle shoe?

How might we elevate comfort and support standards compared to other outdoor shoes on the market?

How might we make a shoe that can be worn with many different outfit styles?

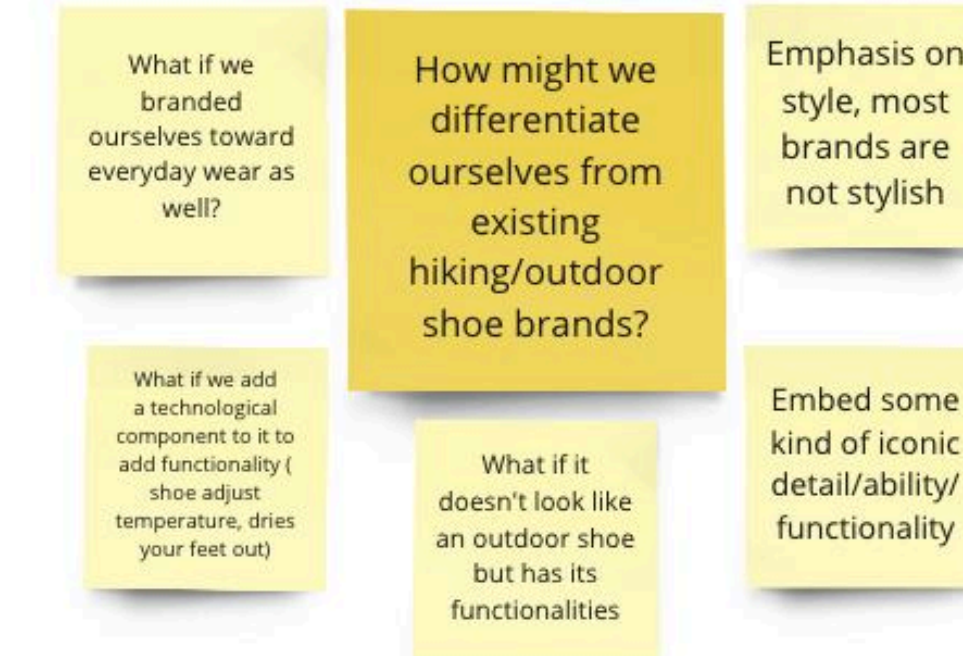

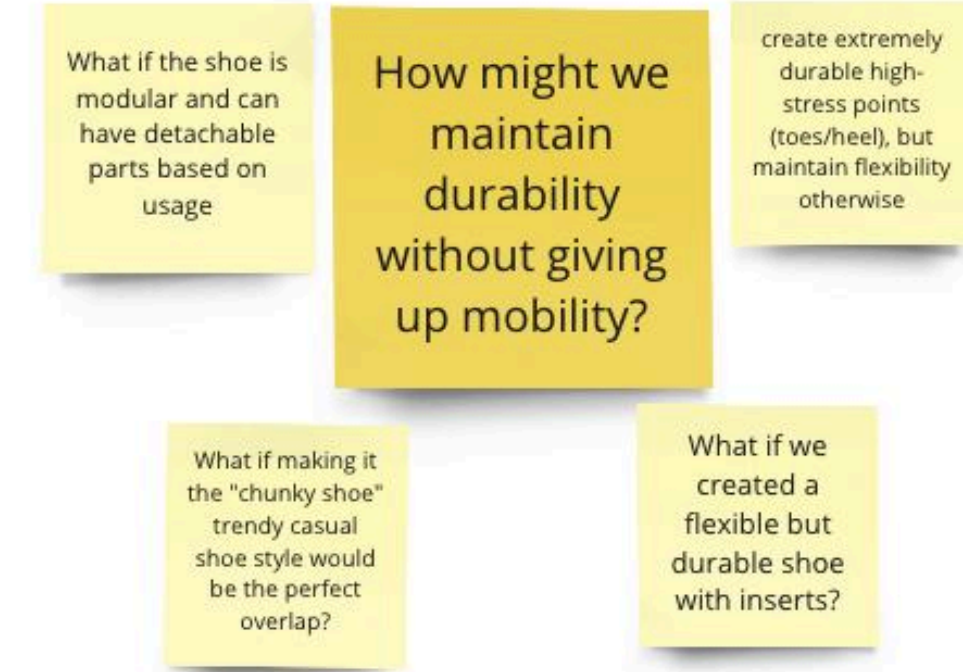

How might we make a shoe that can be worn for various weather conditions?

How might we make a shoe that is comfortable but durable?

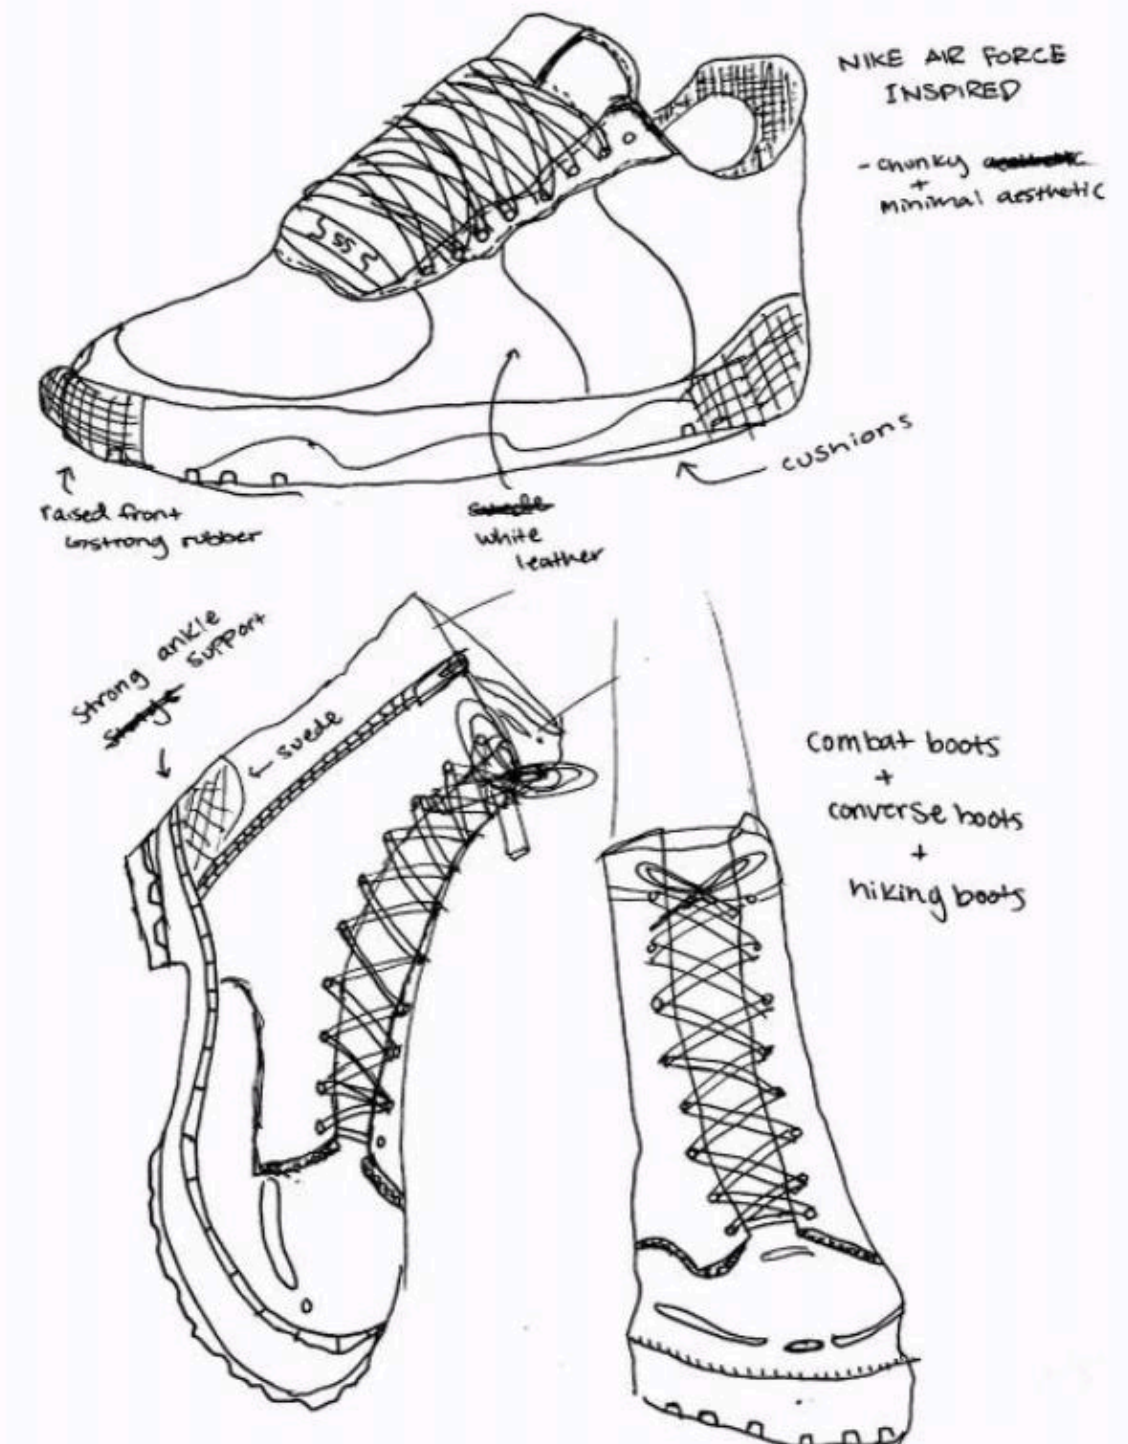

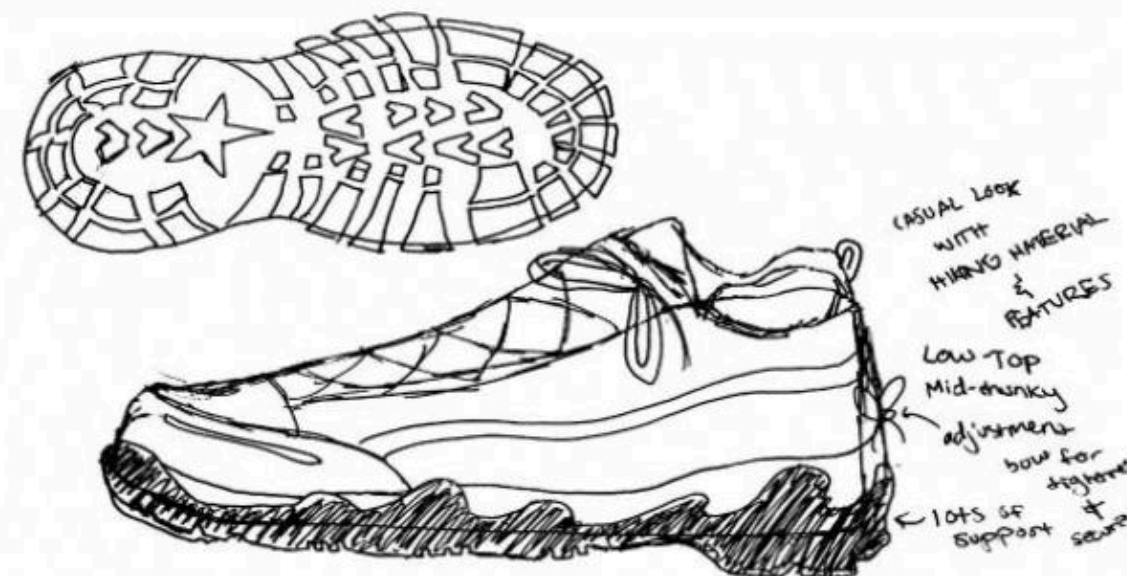

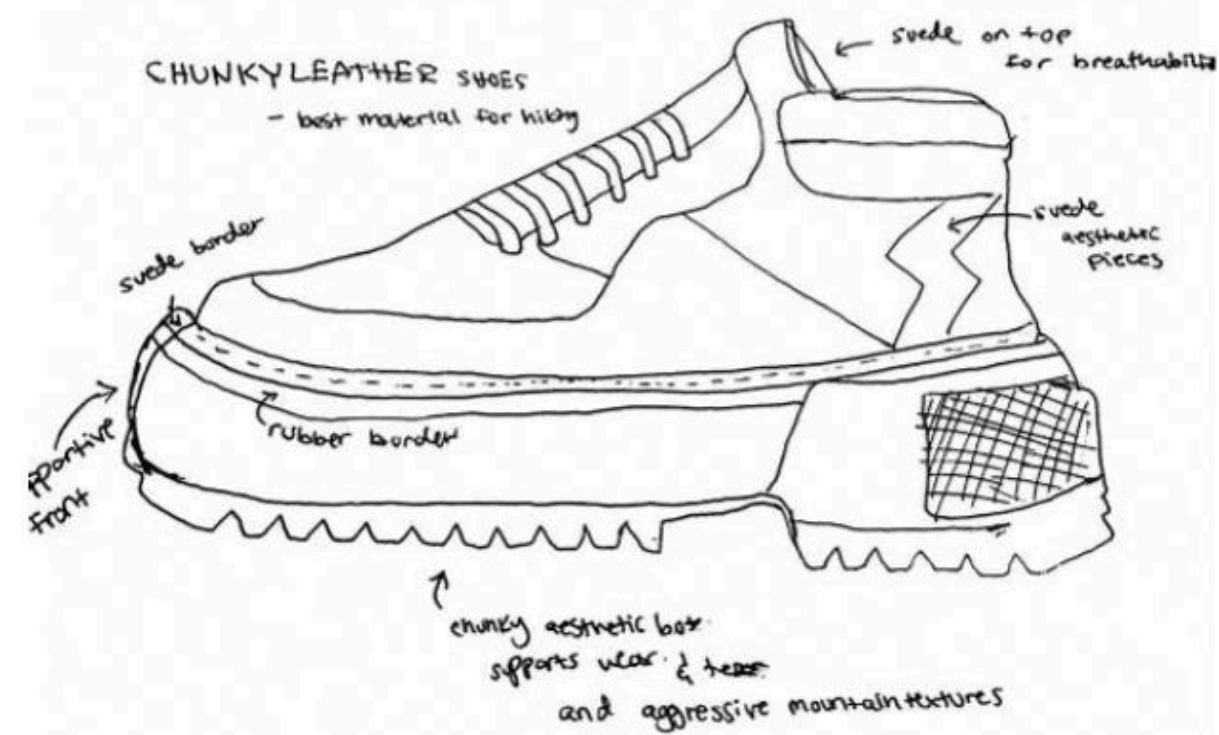

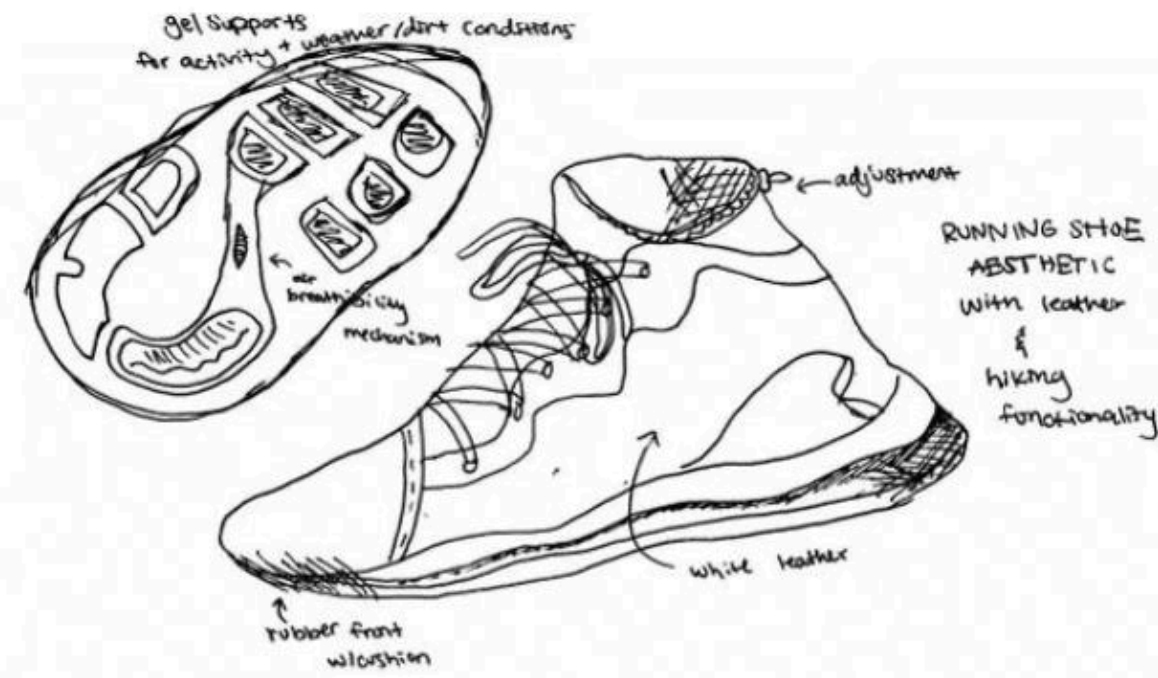

How might we make a lifestyle shoe that would encourage users to wear it everyday?

How might we make an outdoor shoe for a novel, young, and active individual?
