ARUP

Final Proposal

“There’s nothing to do in DTLA.”

“It’s hard to be spontaneous.”

“I don’t know LA beyond USC.”

A young adult in LA who feels uneasy about utilizing and exploring downtown, wants to spend time in the city, but lacks trust and access toward public spaces.

Even in an age of smartphones and GPS, physical wayfinding elements and signage systems strengthen brands by improving the legibility, navigation, understanding and accessibility of the environment.

Creative Sign Designs

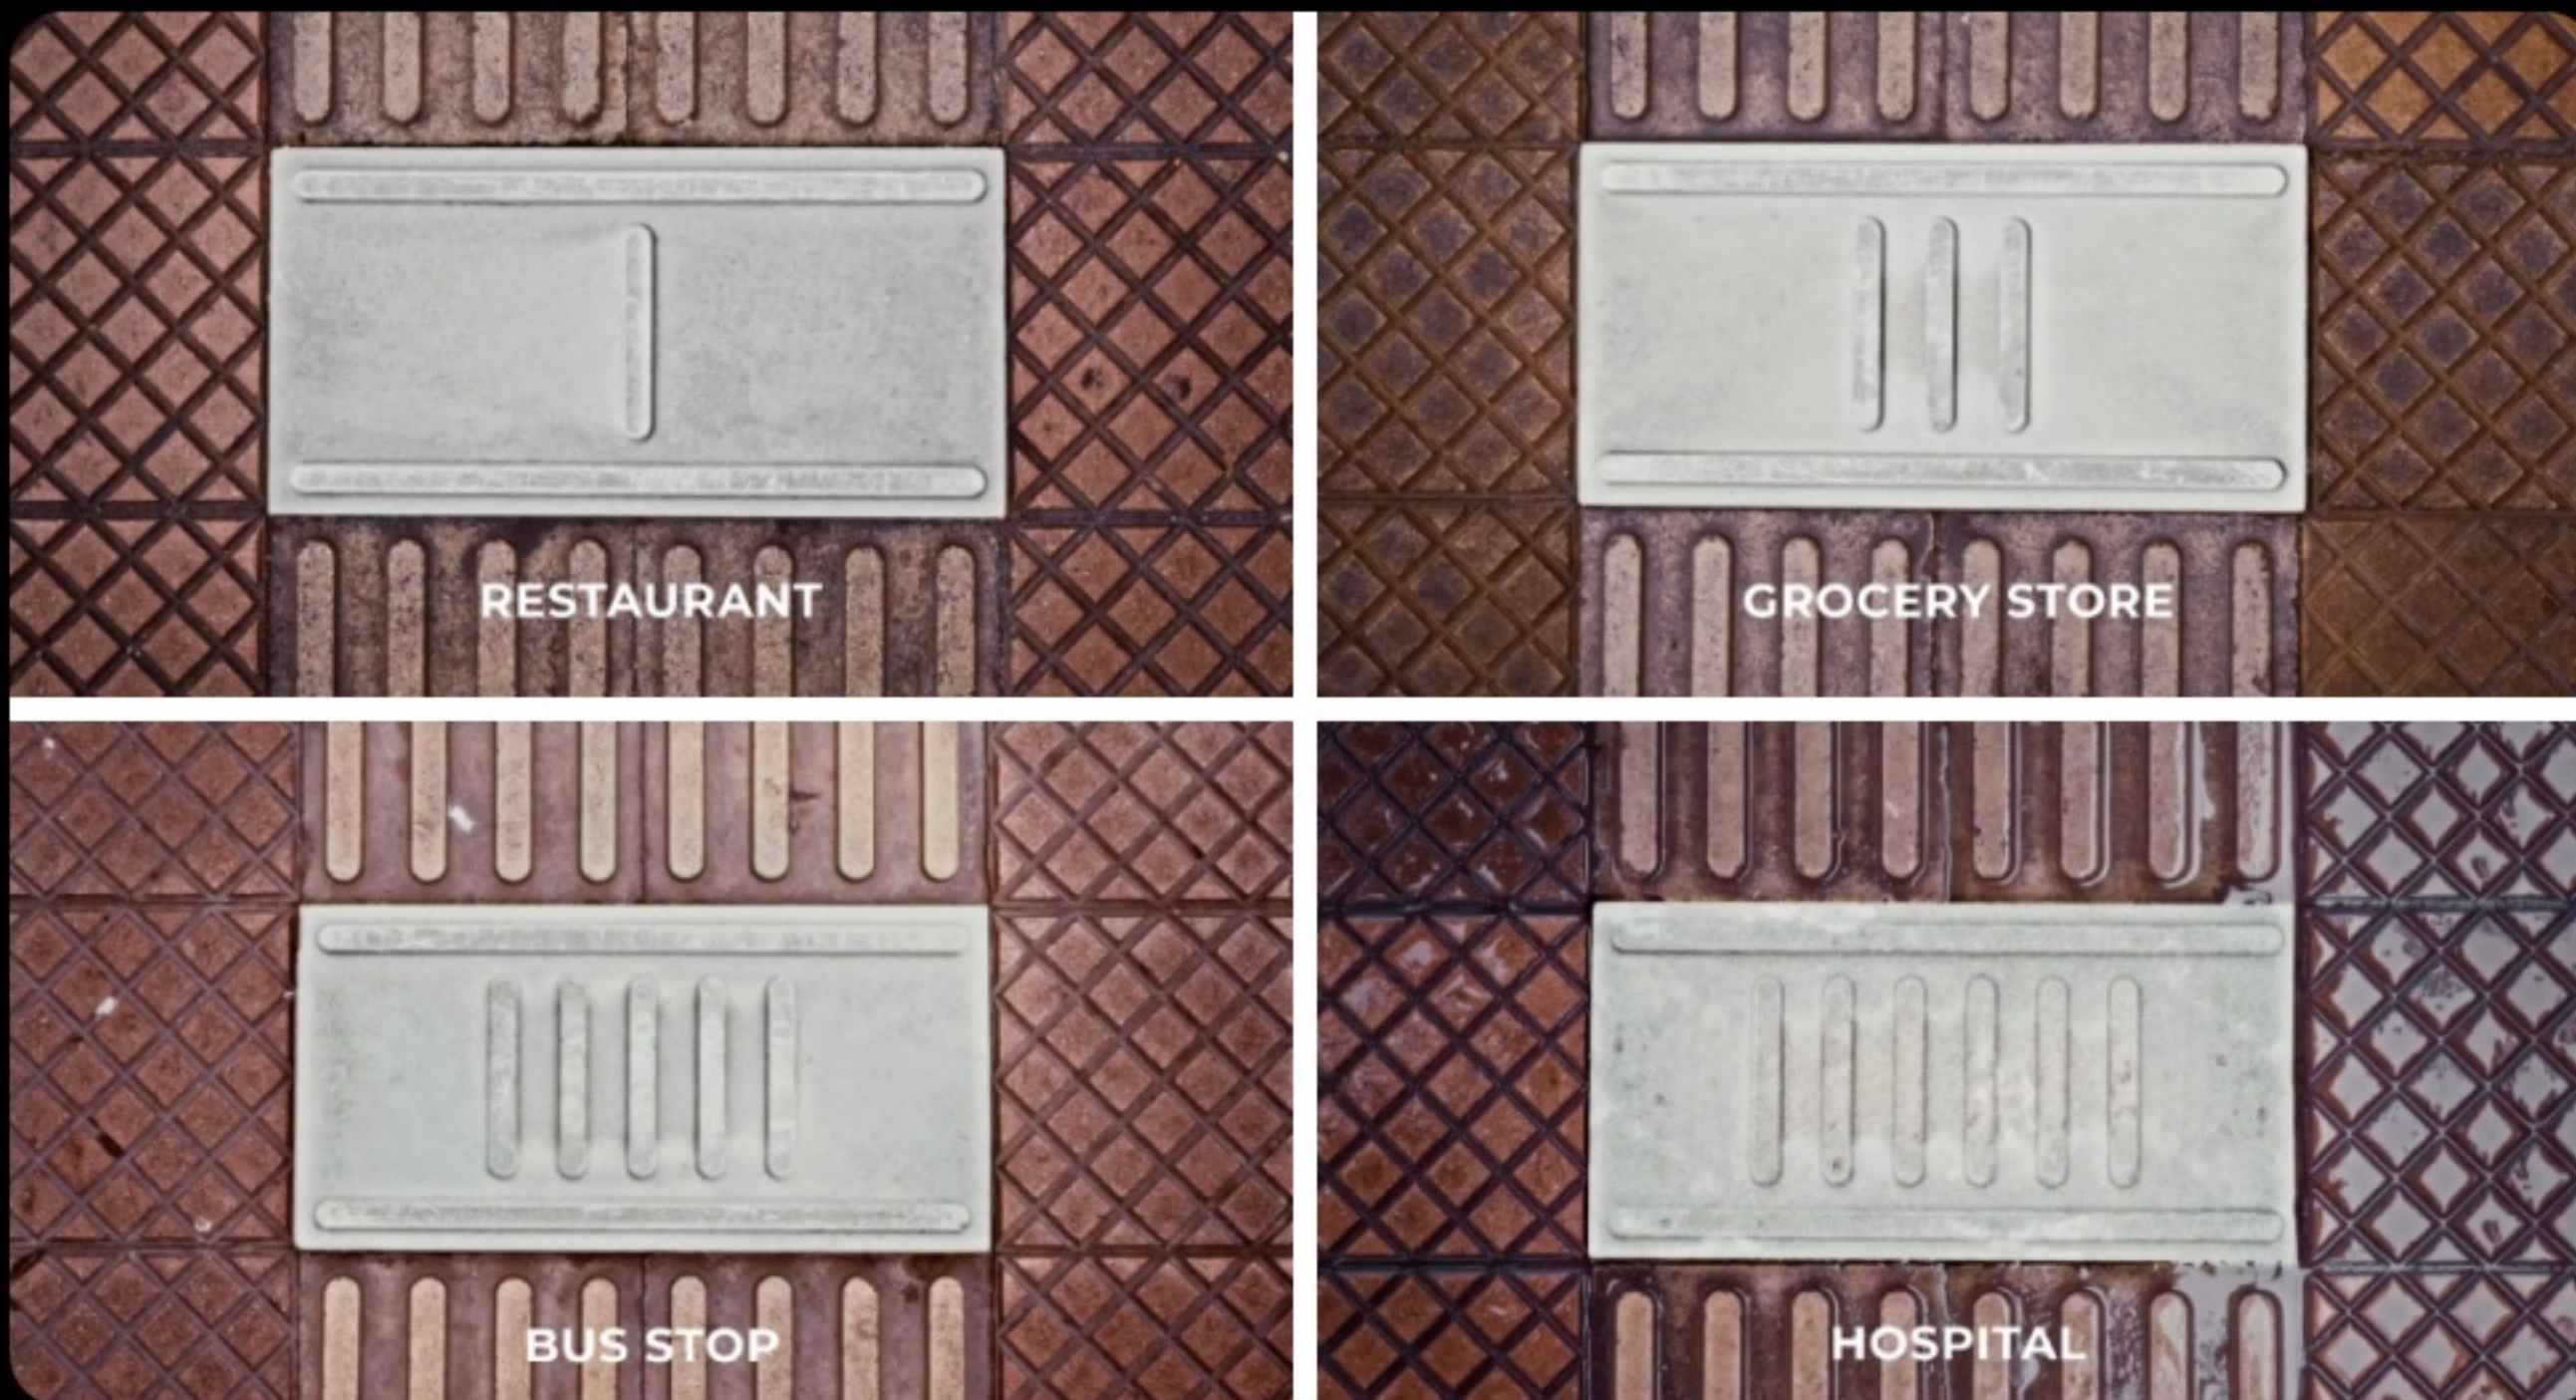

Montessori Method for Google wayfinding

De Fiddes

- Utilizes texture, letter, shape, and color to create tactile wall structures
- Useful for wayfinding and pieces of interest for residents to interact with

Analysis

Wayfinding in Sol Cement's Sightwalks

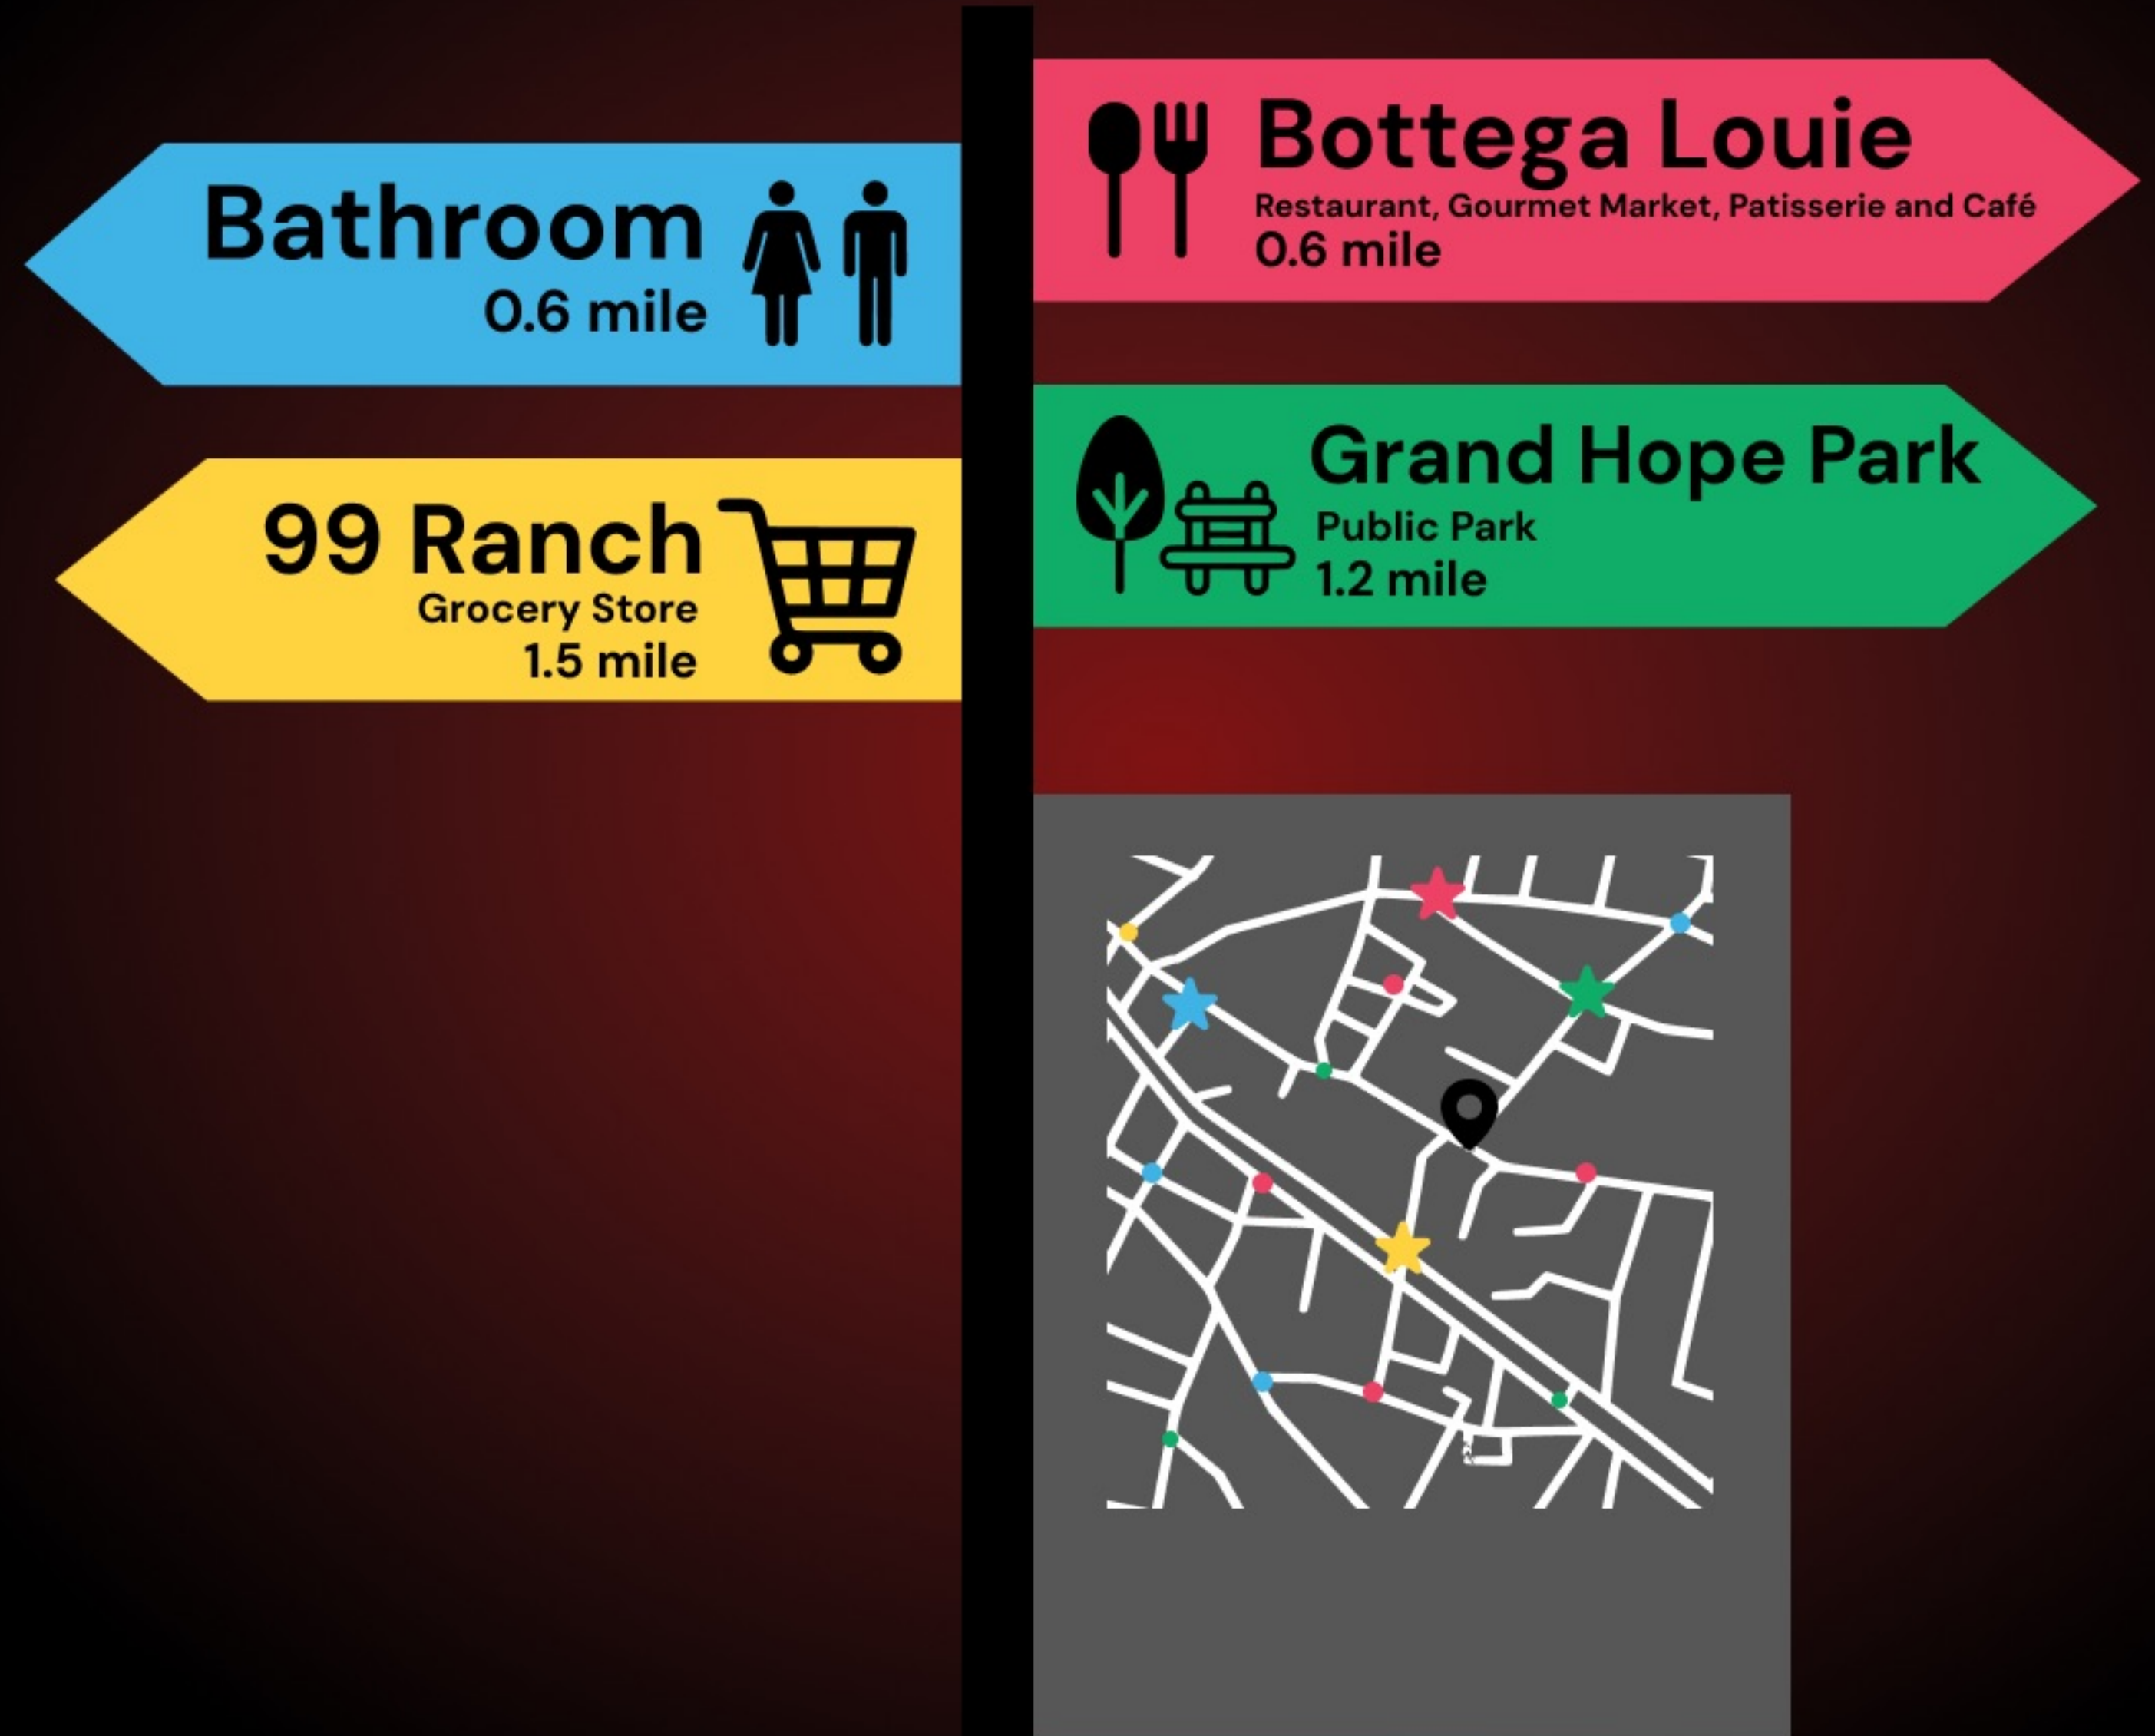

A series of cement tiles with numbered lines to help the visually impaired identify the types of businesses or establishments they are passing by.

WPP

A visual and tactile wayfinding experience.

Promoting accessibility of downtowns by reinventing wayfinding resources through visual and tactile design while infusing creativity and culture of local communities.

1. Informational
2. Directional
3. Identification

1. Informational
2. Directional
3. Identification

 **Restaurant**
0.6 mile

Bathroom 
0.6 mile

 **Park**
1.2 mile

Grocery Store 
1.5 mile

1. Informational
2. Directional
3. Identification

Business Model

1. Government funded
2. Stores can pay for wayfinding ads to locate their store
3. Can offer ad space, but may lead to bias and monetary leverage

Strategy

Impact vision

1. Accessible, navigatable cities with minimal phone usage
2. Equitable sidewalks for all abilities
3. Self-sustaining culture of social connection and cohesion
